Kettal is a family business established in Europe in 1966.

All of our products are manufactured 45km from Barcelona in a small coastal town. We pride ourselves on our European made quality. In-house manufacturing allows us to pay close attention to detail and gives us the ability to meet our clients' customization requirements, making each piece of Kettal furniture unique and exclusive.

The importance of research – both scientific and technological – has always been at the forefront of our product development. The high-quality products we offer today are the result of our spirit of innovation.

We have our own state of the art manufacturing plant where the product is designed, manufactured and tested locally.

Our manufacturing processes involve intense manual labor and 85% of Kettal products are handmade. Our handmade ethos means that we build strong yet beautiful Kettal pieces that display an exquisite attention to detail.

Sustainability: Building a greener tomorrow.

At Kettal, we are committed to more than just creating exquisite outdoor furniture and designs. We are dedicated to shaping a sustainable future where beauty and nature coexist harmoniously. Our journey towards sustainability is rooted in a deep respect for the environment and a passion for innovation.

In an era where the preservation of our planet is of utmost importance, Kettal is taking meaningful steps towards reducing our carbon footprint, conserving natural resources, and minimizing waste. Our sustainable practices extend from the selection of eco-

friendly materials to energy-efficient manufacturing processes, all while maintaining our unwavering commitment to craftsmanship and design excellence.

Join us in exploring the world of Kettal Sustainability, where style meets eco-consciousness. Discover how we blend creativity with responsibility, striving to inspire a lifestyle that not only enhances outdoor spaces but also safeguards the planet for generations to come. Together, we can forge a greener tomorrow, one design at a time.

We monitor the life cycle of our products.

Environmental aspects

Nearly 100% of paint used is recyclable and eco-friendly.

The most significant environmental aspects in the furniture sector are related to the consumption of raw materials, specifically fuel, paint and wood used in furniture manufacturing. With this in mind, we implement continuous measures to minimise any negative impacts on the environment. For example, Kettal carries out product research to improve processes and assess the possible external impact of its products.

True to its philosophy of respect for the environment, Kettal ensures that its main materials, such as paint and wood, are both high-quality and environmentally sustainable. As a result, almost 100% of the paint it uses is recyclable and environmentally friendly. Its main supplier of paint used in the manufacture of furniture has both quality certifications (Qualicoat, GSB, IKS, Quali Steel Coat) and environmental certifications for its products (verified by AENOR in accordance with its Global EPD type III ecolabel system, ISO standards, etc.).

As regards wood, Kettal uses teak certified by the agency SUCOFINDO, which guarantees environmental requirements, commitment to quality, occupational health and safety and social responsibility. Likewise, following its commitment to offer the best design and the highest product quality, for each new design it draws up an Environmental Product Declaration (EPD) for the purpose of assessing the

environmental impacts. The study for the EPD produces quantitative information on the product's environmental performance through all stages of its life cycle. This information is relevant when identifying sources of environmental impact, prioritising, making decisions focused on minimising the environmental impacts of similar or future products, implementing eco-design strategies and providing consumers with environmental product information.

Given the characteristics of the sectors in which Kettal operates, it does not use any materials or production processes that directly release greenhouse gases (GHGs) or other substances with a serious environmental impact.

Products

Our products are local manufactured and 85% handmade.

The human factor is crucial as manual processes take priority over mechanical ones. This allows using techniques that would not be possible in a standard production line process and meticulous control over the quality.

Kettal has analyzed the variants of product life cycle to minimize environmental impact as far as possible. Not only in our raw material usage, but also other variables such as CO2 emissions from transport or use and durability. Under this premise, the raw materials are recyclable and/or recycled, and the objective is to produce all components close to the production site. For example, the essential raw material used at Kettal, such as fabric, rope, and aluminium, are produced within a radius of 100km. Also, each design is aesthetically designed and technically developed to last as long as possible, that is why Kettal keeps technical drawings and product patterns that are 30 years old in order to be able to replace components and extend the life of the product.

Our mission is to create furniture that is timeless and contemporary, combining creativity, personality, innovation, and modern production methods. We praise the simplicity and beauty of everyday life, the excellence in our production and customer service. We believe in sustainable growth through building lasting relationships and products.

When it comes to our products, sustainability is at the core of our design and manufacturing processes. We carefully select materials that are ethically sourced and environmentally friendly, ensuring they meet our high standards for quality and durability. We embrace innovative technologies and techniques that reduce waste, energy consumption, and carbon footprint throughout the production cycle.

Additionally, our commitment to sustainability extends to our supply chain. We work closely with our suppliers to ensure they adhere to responsible and sustainable practices. By promoting fair labor conditions, minimizing environmental pollution, and supporting local communities, we strive to create a positive impact beyond our own operations in Bellvei, a small coastal village 45km from Barcelona.

Materials

Materials are an important part of caring for the environment and a key factor in the product life cycle. All materials are recyclable and recycled as much as possible, as long as they have the characteristics to ensure durability. The better the quality, the longer the product life cycle. And a longer life cycle means it is more environmentally friendly, as fewer manufacturing processes will have to be put in place, reducing the carbon footprint and generating less waste.

Our raw materials are not only recyclable, but recycled. We study the impact of the material recovery process and the durability of the material over time. The essential raw materials are produced locally, within a radius of 100km. We have analysed each product life cycle to minimize environmental impact as far as possible. Not only raw materials, but other variables such as CO² emissions from transport or use and durability.

Materials

Aluminium	85% Recycled	100% recyclable	Carbon emissions: 6,99kg CO2 eq/kg Durability average: 30 years
Terrain Coatings	0% Recycled	0% recyclable	Carbon emissions: 0,88 kg co2 eq/kg Durability average: 20 years
Relate fabrics	10% Recycled	100% recyclable	Carbon emissions: 0,321 kg co2 eq/kg Durability average: 15 years
Glass	20% Recycled	100% recyclable	Carbon emissions: 0,79 kg co2 eq/kg Durability average: 30 years
Stainless Steel	70% Recycled	100% recyclable	Carbon emissions: 4,55 kg co2 eq/kg Durability average: 20 years
Bela Ropes and Stripes	50% Recycled	100% recyclable	Carbon emissions: 2,21 kg co2 eq/kg Durability average: 15 years
Terrain Elements Fabrics	10% Recycled	100% recyclable	Carbon emissions: 3,81kg co2 eq/kg Durability average: 15 years
Parallel	60% Recycled	100% recyclable	Carbon emissions: 2,72 kg co2 eq/kg Durability average: 20 years
Ceramic	0% Recycled	85% recyclable	Carbon emissions: 0,67 kg co2 eq/kg Durability average: 30 years

Key values

We do not build in obsolescence.

Fluorocarbon-free Fabrics

Creation of Terrain Fabrics, first fabric finished with a fluorocarbon-free compound, which is the ideal way to achieve wearing comfort and protect the material in an environmentally friendly way. Since then, all our fabrics are fluorocarbon-free.

FSC Wood

All wood used in our furniture is FSC certified, ensuring its sustainable origin and responsible management. The wood used in our furniture has been sourced from well-managed forests, supporting the conservation of natural habitats and the livelihoods of local communities.

Goal: Zero emissions

At Kettal, our goal is to achieve zero emissions by 2036. We are committed to minimizing our environmental impact and actively working towards a sustainable future. Through innovative practices, energy-efficient technologies, and responsible manufacturing processes, we aim to eliminate greenhouse gas emissions from our operations entirely. We understand the urgency of addressing climate change, and reaching this ambitious target is an essential step in creating a better world for future generations.

Pavilions

Our Pavilions are made with 85% Recycled materials.

Carbon footprint

Since the past year, we have been analyzing the carbon footprint of each of our products. In our commitment to sustainability, we believe it is essential to understand and reduce the environmental impact of our manufacturing processes. By examining the carbon footprint, we aim to identify areas where improvements can be made, such as optimizing energy consumption, reducing emissions, and implementing eco-friendly materials. This ongoing analysis allows us to make informed decisions and work towards creating more environmentally-conscious products for our customers.

Environmental-certified materials

Our materials are backed by environmental certifications. These certifications ensure that the materials we use in our products have been sourced and processed in an eco-friendly and sustainable manner. We are committed to upholding these environmental standards and continuously seeking ways to minimize our ecological footprint.

CFC-free polyurethane

The polyurethane we use is CFC-free. CFC stands for chlorofluorocarbon, which is a harmful substance known for its ozone-depleting properties. By opting for CFC-free polyurethane, we ensure that our products contribute to a healthier planet by reducing the release of harmful substances into the atmosphere. We believe in creating sustainable and responsible designs, and this commitment extends to the materials we choose.

Paint

The main supplier of paint used in the manufacture of furniture has both quality certifications (Qualicoat, GSB, IKS, Quali Steel Coat) and environmental certifications for its products (verified by AENOR in accordance with its Global EPD type III ecolabel system, ISO standards, etc.).

We care about our employee's security and wellbeing.

- Strict Workplace Security and Protection norms and continuous Workplace Risk Assessment and Training.
- Internal career promotion enhancement giving priority to fill an open role with an existing employee instead of hiring someone new.
- Improve work-life balance with flexible work hour schedules.

We promote diversity and inclusion within our employees.

- Advocate for the people to maintain pay equality.
- Equal pay policy between genders implementing fair scheduling practices.
- Recruitment policy does promote gender equality and multi-cultural inclusion.
- Application of Spanish Family leave and childcare policies.
- Acknowledgement of holidays for all cultures.
- Promotion of team working across the organization.

Our average period of employment is 19,26 years.

Officespace

The need for flexible, open-plan workspaces is clear. Kettal Workplace products allow you to design layouts that respond both to the expectations of modern employees and to the unique requirements of your company. Like an architect shaping a city, you can define the structure of your workplace, creating a balance between private and shared areas, and shaping the overall flow to foster collaboration, well-being, and productivity.

A workplace resembling a living city, with its interconnected neighborhoods, networks & spaces.

Pi system, by Kettal Studio

The Phone Booth S and Phone Booth L (Pi) are innovative micro-architectural solutions designed to transform modern work environments. They create independent zones within the office where people can isolate themselves for calls, video conferences, or focused work—without the need for enclosed rooms or traditional doors.

Both models stand out for their flexible and functional structure, offering exceptional acoustic comfort. Made from recycled PET panels, they not only reduce and absorb disruptive noise but also bring a refined aesthetic with a soft, textile-like finish. This combination ensures a quieter and more welcoming atmosphere in open-plan offices.

The Phone Booth S is compact and efficient, ideal for private calls or individual tasks that require concentration. The Phone Booth L (Pi) extends the concept, offering a more spacious area designed for

small meetings, shared video calls, or collaborative work in a calm setting.

Their orthogonal “H”-shaped design allows for seamless integration into any office layout, with quick installation that does not interfere with the building’s structure. Additionally, they can be reconfigured or combined to adapt to evolving workspace needs.

With their sustainable approach, versatile design, and acoustic performance, the Phone Booth S and Phone Booth L (Pi) redefine how privacy and focus are achieved in dynamic office environments.

OTI

Features

Recycled Materials

Made with sustainability in mind, the PI space divider features PET materials and 95% recycled aluminum—an eco-conscious solution for modern spaces.

Acoustic panel

Designed for sound absorption, the acoustic panels feature wave-shaped surfaces that help reduce noise and enhance comfort in shared spaces.

Acoustic ceiling

Innerse in Peaceful natural day light casacde. Turn the night into a harmonious dance of stars

AirGlow (Phone Booth)

A good air renewal system provides comfort and well-being. A thin layer of air from above refreshes the air in the cabin. A laminar of light from below bathes the wall and work area.

SkyLight (Phone Booth)

Innerse in Peaceful natural day light casacde. Turn the night into a harmonious dance of stars

FlexTrack

The FlexTrack system offers versatile rail-mounted functionality, allowing you to attach shelves, hooks, magnetic boards, and more—adapting seamlessly to your changing needs

Analog Controller

Analog controls let you adjust lighting with precision, while the PIR sensor adds smart automation by detecting presence

Connectivity

Includes four built-in power outlets for convenient device charging and seamless workspace integration.

Controls (Phone Booth)

Plug USB-A / USB-C / shelf light dimmer, fans power regulator

Integrated wheels

Equipped with discreet wheels and a built-in leveler, PI moves easily and stays firmly in place—flexibility without compromising stability.

Watch the collection video here and discover all its features in action.

Kall, by Kettal studio

Introducing the Kall Collection - A modern solution for private and comfortable conversations. We believe that a Phone booth should simply be the door of a meeting room, which is why we have made the glass door the protagonist, and the space of the "Phone booth" corresponds to the projection of this door, making it appear embedded against the wall when viewed frontally. Our design ensures minimalism and functionality without any unnecessary frills.

Privacy is a key aspect, and we understand that users need a discreet environment for confidential meetings. Our small side walls provide structural support while also maintaining privacy for documents, device screens, and even facial expressions during a conversation. The addition of a translucent curtain further enhances the sense of protection against prying eyes.

We understand that a Phone booth should not be a cold space, so we have created a warm and inviting environment. Our design provides a pleasant atmosphere, making it closer to a meeting room or a home room rather than a typical elevator cabin.

Technology is an essential component, and we have ensured that the technology is intuitive and user-friendly. Everything is controlled electronically, with scene creation systems, table height regulation, ventilation control, and connectivity all intentionally hidden. Our interaction controls simulate the controls of old HIFI equipment, emphasizing that this booth is a simple and pleasant space where users can provide the main technology using their own devices. For tech-savvy users, we also offer a touchscreen control system.

The Kall Phone booth family consists of various sizes. The "S" is the basic and standard size. The "M" is 30cm wider, allowing for a swivel armchair, similar to a lounge room, with a relaxed work posture. We also offer an "L" version for two people and a "XL" for 4. All of our Phone booths are modular, which means they can be combined to create special configurations according to the situation.

Kall Features

Silent Ventilation

The air enters through the floor (back of the stool) and comes out through the gap of each side of the table panel (1 cm of space) that is used to raise and lower the table. The cabin has a flow rate of 115m³/h (32 l/s) 1 air change per minute. The nominal flow rate of the fans is 120m³/h.

Integrated wheels and Leveling feet

To ensure the stability of the cabin, the position of the regulator feet should be adjusted to raise the wheels. This procedure can be performed using a wrench, as the regulator feet have a nut that allows for adjustment. To move the cabin it is necessary to raise the regulator feet again.

Sustainably Soundproof

Class B, according ISO 23351-1
Test: 28,9 dB (D_{SA})
Acoustic glass panels 3+3 with 35 dB.
Wood panel + PET + Foamed fabric.

Test Report

Adjustable Stool

- Adjustable via lever located under the seat.
- Adjustable from 550 to 800 mm.
- It supports a maximum weight of 200 kg.

Swivel armchair

This versatile piece of furniture provides a comfortable and stylish seating option that can be easily adjusted to face any direction. With its sleek design and smooth rotation, the Swivel Armchair is ideal for comfortable meetings.

Kern Screen

The Kern screen is an intuitive control interface used in Kall phone booths to manage various environmental settings. With the Kern screen, users can easily adjust lighting, air circulation, and other ambient features, providing a comfortable and customizable experience for private workspaces.

LED Ceiling Light

- LED Ceiling Light
- 3000K (Dimmable)
- Ambient Lighting

LED Shelf with Light

To support your iPad, mobile phone, or complete the space with a picture or different decorative elements

- LED Shelf Light
- 3000K (Dimmable)
- Task Lighting

Adjustable Desk

The table height is adjustable by the cylindrical switch on the controller. It can be adjusted from 700 to 1200 mm in height. When non-adjustable height is 1100mm. It supports a maximum weight of 100 kg.

Controller

Adjustable table version. Plug USB-A / USB-C (3A@60W) / shelf light dimmer, fans power regulator and desk height regulator.

Occupancy Light (optional)

The occupancy light in the phone booth indicates whether the space is free or in use. When the light is green, the booth is available for use, but when it turns red, it signals that someone is inside. This simple system helps manage space effectively and ensures privacy for users.

Modularity

Our Kall booths can be combined in different ways to create work environments according to the needs of each user and adapt to different types of space.

CE Certified

Kall Acoustic side panels

28,9 db

Description

All our panels have been tested to ensure they meet the required acoustic levels. We have evaluated various wall combinations to provide guidelines regarding their acoustic performance. Acoustic performance varies depending on the material selection for each wall.

They are made from sustainable materials such as recycled particleboard and PET, along with a soundproofing membrane that provides an acoustic performance of up to 28.9 dB (DsA). Additionally, the eco-friendly panels reduce and control sound reverberation within the Pavilion, further optimizing sound insulation.

Key functions

- Sustainable materials
- Memory acoustic foam
- Easy clean material
- Odor free and antimicrobial

Phone Booth M, by Kettal studio

Privacy can be hard to come by in large open offices. Our Phone Booth M allows your employees to make calls or hold video conferences with unbroken focus and without disturbing the rest of the team. The Phone Booth M design is inspired by the traditional telePhone booth. They are an elegant yet functional solution for your office. Comfortable and echo-free, the Phone Booth M is also simple to install.

Pavilion M, a modular structure to reinvent the workplace.

Many companies have adapted to the increasingly unpredictable market by creating agile organizational structures. To be agile, they also need office structures that can be easily reconfigured to suit ever-changing requirements. Pavilion M is the ideal structure solution for these new work environments.

The principal function of our Pavilion M is to provide a flexible way of dividing offices into zones while offering enclosed workspaces. It consists of an aluminum structure that can be built out with a variety of materials: glass, wood and fabric, as well as practical fittings: shelving, TV unit, whiteboards and bulletin boards. Our Pavilion M also allows for the integration of electrical cables and functional accessories that can be tailored to your company's specific needs.

Pavilion M facilitates the creation of countless office and workspace layouts that can be rapidly adapted to accommodate changes to your headcount or department functions. Thanks to its modular nature, the Pavilion M system gives you the power to respond quickly to the constantly changing modern world of work.

Modularity

Pavilion M adapts to the context of any modern workspace. It is a dynamic way to transform your office space, thereby increasing productivity and creativity amongst your teams. It gives you the option to create several spaces; from one-person private rooms to those that can accommodate the entire team.

Your office can be set up in a variety of different configurations. The basic structure conforms to the grid layout commonly used in office planning and it has ceiling heights that can adapt to all environments.

The ingenious square tube and corner connector system generates a sense of light and space.

Meeting rooms

Comfort and silence means better communication and better meetings.

Whether it is a meeting with colleagues or clients, you want to optimize its effectiveness. Comfort is crucial — particularly when your meeting is long in duration. We recognize this and have designed accordingly. Our superior sound insulation provides a quiet, distraction-free environment for holding your meetings without disturbing those in the vicinity.

Reception With Meeting & Printing Area

Description

A dedicated printing area that neighbors a smart reception and spacious meeting room to support your business operations.

Specifications

- 4+4 or 6+6 mm
- Pivot door
- Aluminium frame
- Acoustic panels
- Absorption system
- Fabric or glass
- Faced external wall
- Air ventilation system
- LED lighting
- PIR sensor

Lockers

Description

A convenient locker area to support your employees and their lifestyles.

Specifications

- 4+4 or 6+6 mm
- Pivot door
- Aluminium frame
- Acoustic panels
- Absorption system
- Fabric or glass
- Faced external wall
- Air ventilation system
- LED lighting
- PIR sensor

Kitchen

Description

A clever and open kitchen to support your employees while they recharge and interact with each other.

Specifications

- 4+4 or 6+6 mm
- Pivot door
- Aluminium frame
- Acoustic panels
- Absorption system
- Fabric or glass
- Faced external wall
- Air ventilation system
- LED lighting
- PIR sensor

Lighting

A space cannot be designed without careful consideration of lighting. For this reason, we have created a new language of light, from the ground up, that elegantly integrates into the architecture.

We are not just another lighting company. But we know an adequate amount of light and a clever placement improves mood and energy levels, which is essential to consider in the well running of the workspace.

Elegantly integrated lighting that rounds out your workspaces.

This lighting system is adaptable to all situations: conversation, concentration, relaxation and more. Form, function and performance is driving the fusion of technology and emotion.

Lighting

Dots Pendant

Magnetic and adjustable hanging lamp (48v) or ceiling-recessed lamp (24V)

Dots Pendant Open/Close

Magnetic and adjustable hanging lamp (48v) or ceiling-recessed lamp (24V)

Dots Articulated

Magnetic and adjustable hanging lamp (48V).

Dots Light Down/Up

Column lamp with accessories and options.

Led Track

Magnetic and adjustable with 48V rail integration.

Led Track Curtain

This linear, homogeneous lighting is integrated with the low-voltage track for the side panels.

Dots Pendant

Lighting

This suspended light is based on the Dots spotlight system. With its two open and closed diffusers, it directs most of the light downwards. By directing most of the light downwards, the shade is molded to illuminate spaces while protecting peoples' eyes from any direct glare. The matte white interior of the elliptical shade helps create a uniform light that is ideal for both directed and general ambient lighting needs.

Technical specifications

Since the introduction of computers, office structures and work habits have never undergone such a radical transformation as the one we are currently experiencing. Thanks to communication technology, offices are becoming public spaces. Many companies create open-plan and inspiring places in which employees and visitors can relax, hold meetings or spend the day working. The daily use of laptops, smartphones and tablets has given rise to new patterns of behavior that are now also observed in offices. Home automation, audiovisual media, network connections and booking rooms are necessary resources for day-to-day work in the office.

Unlock extra workspace potential with cutting edge technology.

Air ventilation

Key functions

- Silent air circulation system
- Intelligent monitoring through CO2, humidity and temperature sensors (optional)
- Equipment has particle filtration and microorganism elimination by germicidal ultraviolet light (optional)
- **Climate building system compatibility**
- Prefilter M5 (65% efficiency 0,3 micron particules)
- Absolute HEPA Filter (99,97% efficiency on 0,3 micron particules. (optional)
- CPZ filter for gas and odor removal (activated Carbon, Potassium Permanganate and Zeolite, efficiency greater than 90%) (optional)

Connection

Description

The electrical system within the Pavilion M is designed to be discreet, elegant and practical. Embedded in the structure, it is easily accessible and is thought within the design.

Control center

Socket End points

Pavilion connection point

Easy access in-wall wiring

Acoustic side panels 42 db

Description

All our panels are tested to ensure they meet the required acoustic levels. We have tested some of the wall combinations to provide guidelines with regard to acoustic levels. Acoustic performance varies depending on the material selection for each wall.

The M glass version offers excellent acoustic performance, creating a comfortable and efficient working environment. It is based on 6+6 laminates with a soundproofing membrane to provide an impressive acoustic performance of up to 42dB. We also offer a range of solid wall options in fabric and wood. Many of these alternative wall options offer excellent acoustic performance properties. Our laminated panels not only provide additional acoustic performance, but also come in a range of colors. As a result, you can customize your Pavilion M to reflect your brand image or simply to create a bright office space. In addition, the eco-friendly panels reduce and control reverberated noise within the Pavilion, further enhancing the overall soundproofing performance.

Key functions

- Fire retardant M1
- Memory acoustic foam
- Easy clean material
- Odor free and antimicrobial

Furniture

Elevate your workspace.
Elevate your life. Discover our new collections, where office meets home, and style meets productivity.

Discover our new products.

Our wide range of durable collections allow you to create work environments and public spaces that are suitable for a wide variety of uses, both for individuals and for teams. We also design products for areas where people can work in silence and with complete concentration.

The furniture collection, which is suitable for both indoors and outdoors, is lively and expressive. It features modern classic designs, with an informal and stimulating language, enriched by contemporary colors and materials.

Passage, by Ronan Bouroullec

Passage as a concept is highly ambiguous and versatile and can be used to describe numerous actions and situations. Passage relates to movement, it describes passing or movement from one place to another, in relation to travel, literature or music.

The Passage chair has any number of uses; it can seamlessly pass from one situation to another, from one place to another, from one use to another... It can be placed indoors or outdoors, displayed in a public place or kept in the comfort of home, in an urban environment or in the country.

Passage is made of aluminium, because this light, resistant material best represents the changing nature of the chair. As well as being recycled and recyclable,

it is highly durable, whatever its use, which greatly reduces the carbon footprint left by its manufacture.

Two important parts create the PASSAGE aluminium chair's unpretentious structure: firstly, a very simple tubular structure, which then supports the backrest and seat, manufactured as a single piece of extruded aluminium. The lightness and flexibility of the seat finishes give the object its unique capacity for adaptation.

Insula, by Patricia Urquiola

The Modular Insula sofa is Patricia Urquiola's updated interpretation of traditional seating used in traditional Arab Majlis, where community members gathered to discuss events and local issues, entertain guests, build friendships, and have fun.

Formally, it is a rational modular sofa with very softened shapes and low height, with a Insula in the backrest that concentrates all the protagonism of the design and provides a decidedly horizontal emphasis. It combines carefully balanced proportions as an architectural element that can be subtly integrated.

Functionally, like the original concept of Arab Majlis, the main function of the Insula sofa is socializing. The multitude of configurations allows it to adapt to all kinds of social situations, both indoors and outdoors: from the reception of an office where one can find a place to work relaxed, to resting in a home or outdoors for sunbathing and having fun.

Its modular design consists of an orthogonal aluminum base with very softened shapes where the seat cushion, very plush and comfortable, is located. The two sizes of its seats allow for various types of backrests: individual, double, angular, etc.

Loden, by Vico Magistretti

Kettal revives the LODEN collection. Originally designed for Gavina in 1961, Loden is a series featuring an armchair and a sofa with a lacquered wood frame made with four cylinder-section legs and a tilted seat, also made of wood, with curved armrests whose design is similar to the profile of the armrests of the Carimate chairs. The seat and backrest are upholstered in fabric. Dino Gavina, a Bolognese businessman, started producing new furniture in the mid-50s by collaborating with well-known designers and put back into producing furniture by Breuer, a renowned designer in NY, like the Cesca and Wassily chairs. The Loden series by Magistretti is part of the collections produced by Gavina in the 60S”

A, by Naoto Fukasawa

Chairs and desks made of solid wood are not very common in the office environment. The concept of working places integrating home and office made a change, and I think it became more like that. The touch of our hands and bodies with the wood means coexisting with trees and getting closer to nature. It means living together. Wooden round bars do not cast strong line shadows in the space. It is beautiful and warm, in harmony with air, light, and people.

M Sofa, by Kettal Studio

In the dynamic world of offices and public spaces, blending function and aesthetics is vital. Offices require design that encourages collaboration, innovation, and well-being. Imagine the transformative influence of the Sofa M collection—a blend of modular straight and curved sofas along with a swiveling club chair—gracing these spaces. These innovative pieces bring versatility and adaptability, mirroring the flexibility needed in modern workspaces and communal areas.

Just as the Sofa M collection seamlessly connects its modules, offices embrace adaptable layouts for diverse workstyles, fostering teamwork. Similarly, public spaces emphasize multifunctionality, accommodating various events. In essence, these spaces harmonize productivity and leisure, bridging our professional aspirations and community bonds with the elegant and functional design of the Sofa M collection.

Materials

The materials in the new collection of the Pavilion M system are represented by fabrics, metals, woods, stones and ceramics. All of these worlds form the basis of the library. The intention is to inspire and invite the professional to explore and combine colors, textures and materials to create new exclusive codes for each project and each use.

Recyclable and exclusive materials, to explore an infinite number of combinations.
